| nonprovisional | NO | \$1510 | \$300 | \$0 | \$1810 | 04/12/2010 |

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: Mail Mail Stop ISSUE FEE

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 484 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 484 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

DETAILED ACTION

The applicants amended claims 1-13 on the amendment filed on 5/31/2009.
 Claims 1-13 are pending.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Joel Fogelson (Reg. No. 43,613) on 12/3/2009.

The application has been amended as follows:

Claim 1, rewrite as follows --"A device for preparation of data to be sent in a continuous stream to at least one receiver via a communication network, said device comprising: memory; means of obtainment of said data originating from a database, said database containing at least two data stream entities for data associated respectively with different transmission throughputs; means of transfer of said obtained data to a system for sending said data as a continuous stream over said network; means of connection of said means of obtainment to one of said data stream entities of the database; and means of switching of the means of connection from one of said data stream entities to another of said data stream entities; wherein: said device comprises means of

Art Unit: 2447

regular increment addition to said data transferred to the system, of error correction codes to form an augmented data stream; said means of switching being designed to switch the means of connection from a first of said data stream entities, associated, with a first sending throughput, to a second of said data stream entities, associated with a second sending throughput greater than said first sending throughput, when the stream of said data transferred augmented with said added error correction codes reaches a threshold throughput equal to the sum of the second sending throughput and of an additional throughput associated with an initial input of error correction codes for said second data stream entity; and said means of addition being designed to reinitialize the addition of said error correction codes to said initial input upon the switching of said first data stream entity to said second data stream entity."—;

- Claim 4, line 4 delete "of addition" and insert -- "of regular increment addition" --;
- Claim 4, line 5 delete "selected entity" and insert -- "selected one of said data stream entities"--;
- Claim 6, line 2 delete "such that" and insert -- "for"--;
- Claim 6, line 3 delete "causes" and insert -- "to cause"--;
- Claim 7, line 5 delete "that is";
- Claim 8, rewrite as follows -- "A server, wherein said server comprises a data preparation device to for preparation of data to be sent in a continuous stream

Art Unit: 2447

to at least one receiver via a communication network, said data preparation device comprising: memory; means of obtainment of said data originating from a database, said database containing at least two data stream entities for data associated respectively with different transmission throughputs; means of transfer of said obtained data to a system for sending said data as a continuous stream over said network; means of connection of said means of obtainment to one of said data stream entities of the database; means of switching of the means of connection from one of said data stream entities to another of said data stream entities; means of regular increment addition to said data transferred to the system, of error correction codes to form an augmented data stream; said means of switching being designed to switch the means of connection from a first of said data stream entities, associated, with a first sending throughput, to a second of said data stream entities, associated with a second sending throughput greater than said first sending throughput, when the stream of said data transferred augmented with said added error correction codes reaches a threshold throughput equal to the sum of the second sending throughput and of an additional throughput associated with an initial input of error correction codes for said second data stream entity; and said means of addition being designed to reinitialize the addition of said error correction codes to said initial input upon the switching of said first data stream entity to said second data stream entity."--;

Claim 9, line 1 delete "of data";

Art Unit: 2447

- Claim 10, rewrite as follows -- "A method for preparation of data to be sent in a continuous stream to at least one receiver via a communication network comprising the steps of: obtaining said data originating from a database, said database containing at least two data stream entities for data associated respectively with different transmission throughputs, by extracting said data from one of said data stream entities; transferring said obtained data to a system sending said data as a continuous stream over said network; switching from one of said data stream entities to another of said data stream entities to obtain said data; adding error correction codes of regular increments to said data transferred to the system, to form an augmented data stream; switching from a first of said data stream entities, associated, with a first sending throughput, to a second of said data stream entities, associated with a second sending throughput greater than said first sending throughput, when the stream of said data transferred augmented with said added error correction codes reaches a threshold throughput equal to the sum of the second sending throughput and of an additional throughput associated with an initial input of error correction codes for said second data stream entity; and reinitializing the addition of said error correction codes to said initial input when switching from said first data stream entity to said second data stream entity."--;
- Cancel claim 11;
- Claim 12, line 1 delete "data"; and

Art Unit: 2447

Cancel claim 13.

Allowable Subject Matter

3. Claims 1-10 and 12 are allowed.

4. The following is an examiner's statement of reasons for allowance:

Independent claims 1, 8, and 10 define the distinct features of obtaining at least two data streams from a database for data with different throughputs, transferring the obtained data of the data streams to a system for transfer in a continuous stream, connecting to one of the data streams, adding regular increments of error correction codes to the obtained data stream, switching to the second data stream, associated with a greater sending throughput, when the first data being transferred with additional error correction codes reaches a threshold throughput equal to the sum of the second data stream and an initial input of error correction codes, and reinitializing the addition of error correction codes for the second data stream upon switching. The closest prior art, Itoh et al. (US 2003/0231589 A1) teaches a data stream with different throughputs, connecting to data streams, adding increments of error correction codes to obtained data stream, switching to a different throughput for the data stream when the data transferred with additional error correction codes reaches a threshold equal to a preset value, and reinitializing the addition of error correction codes for the different data stream throughput, but fails to teach the database of different data stream entities, regular increment addition of error correction codes, and switching of the data stream

Art Unit: 2447

entities. The above limitations in conjunction with all other limitations of the dependent and independent claims 1-10 and 12 are hereby allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - Klayman et al. (US Patent 5,699,365) teaches a method for adaptive forward error correction in data communication;
 - Li et al. (US 2003/0135631 A1) teaches a process for streaming delivery of dynamically scalable media content over a network utilizing rate distortion;
 - Itoh et al. (US 2003/0231589 A1) teaches utilizing a variable transport rate updated over time an utilizing adaptive forward error correction; and
 - Virdi et al. (US 2006/0026294 A1), which does not qualify as prior art, teaches adding regular increments of padding bits to reach a threshold equal to the next video frame transmission level and switching to the next video frame transmission level.
